

REFURBISH AND INSULATE. THE COMPLETE SOLUTION FROM INSULATED HOMES.

By far the most popular reason that we upgrade a home is for our customers to be warmer. Our thick, premium, graphite-infused poly works by trapping your heat inside, keeping the home cosy and warm. This allows you to have your heating on less or to run it at a lower temperature, which in turn sees lower bills for you.

Our thick and strong system also works to keep out heat on a hot day too and helps to absorb sounds.

We have developed our system over the years and know its success comes from the fact that we don't scrimp on materials. We use a premium grey poly underneath the render that is thermally efficient and we also add extra mesh at vulnerable points like corners to prevent damage.

When you have an installer quote you for external wall insulation you should remember there is no set standard product or system, so every company uses different products and some are good and some are not so good.

Recently though, as people have become used to seeing homes with External Wall Insulation, we are installing simply because people want their home to look good and to know they don't have the endless bother and expense of repairing ply and re-painting every few years.

We can also refurbish your entire park home and we can offer a free design service included in your survey. We install lightweight, insulated Metrotile roofs, energy efficient upvc windows and doors, porches, extensions and conservatories. We can remodel interiors and even add finishing touches to the outside of your

home such as a skirt, guttering, soffits and fascia.

Insulated Homes is accredited by multiple organisations like Trustmark, NICEIC, the FCA and Which? These companies check either our business processes or our work to make sure we are doing what we say we are.

Our system has also been fire-safety checked specifically on ply-constructed buildings like park homes. We were awarded a rating of 0, the highest rating achievable.

We've scored 99% in a customer satisfaction rating, won dozens of awards, provide a 25 year guarantee plus an independent 10 year insurance backed guarantee too, so you'll know your home is in safe hands.

WHAT MAKES OUR SYSTEM DIFFERENT?

Small, premium graphite grey poly panels (never large sheets) are built upwards from an aluminium starter rail in a staggered pattern. This poly is attached to the home using steel, plastic coated screws (the white dots in this picture) and any tiny gaps filled with fire-proof foam. The red strips you can see in the foreground are the strengthening corners that are just about to be carefully fitted to all the homes corners and edges (look carefully and you'll notice it next to the conservatory door on the left where it's been fitted to prevent damage). Render is trowelled on over the poly and a super strong mesh weave is carefully pressed into it and another coat of thin render put on top. After a week to set hard (cure), a third layer of silicone textured, coloured render is trowelled on top providing a tough, durable transformation to the home.
